https://drive.google.com/open?id=0B-ob6L_QjGLpcG9CWHp3bXINTTg QUESTION 31 Which of the following characteristics differentiate a rainbow table attack from a brute force attack? (Select TWO.) A. Rainbow table attacks greatly reduce compute cycles at attack time. B. Rainbow tables must include precompiled hashes. C. Rainbow table attacks do not require access to hashed passwords. D. Rainbow table attacks must be performed on the network. E. Rainbow table attacks bypass maximum failed login restrictions. Answer: BD QUESTION 32 Which of the following BEST describes a routine in which semicolons, dashes, quotes, and commas are removed from a string? A. Error handling to protect against program exploitation B. Exception handling to protect against XSSRF attacks C. Input validation to protect against SQL injection D. Padding to protect against string buffer overflows Answer: C QUESTION 33 Which of the following is an important step to take BEFORE moving any installation packages from a test environment to production? A. Verify the hashes of files B. Archive and compress the files C. Update the secure baseline Answer: A QUESTION 34 Which of the following cryptographic attacks would salting of passwords render ineffective? A. Dictionary B. Rainbow tables C. Birthday Answer: A QUESTION 35 A network administrator wants to implement a method of securing internal routing. Which of the following should the administrator implement? A. DMZ B. NAT C. VPN D. PAT Answer: A QUESTION 36 Which of the following types of keys is found in a key escrow? A. Public B. Private C. Shared D. Session Answer: B QUESTION 37 A senior incident response manager receives a call about some external IPs communicating with internal computers during off hours. Which of the following types of malware is MOST likely causing this issue? A. Botnet B. Ransomware C. Polymorphic malware D. Armored virus Answer: A QUESTION 38 A company is currently using the following configuration: * IAS server with certificate-based EAP-PEAP and MSCHAP. * Unencrypted authentication via PAP. A security administrator needs to configure a new wireless setup with the following configurations: * PAP authentication method. * PEAP and EAP provide two-factor authentication. Which of the following forms of authentication are being used? (Select TWO.) A. PAP B. PEAP C. MSCHAP D. PEAP-MSCHAP E. EAP F. EAP-PEAP Answer: EF QUESTION 39 A security administrator is trying to encrypt communication. For which of the following reasons should administrator take advantage of the Subject Alternative Name (SAM) attribute of a certificate? A. It can protect multiple domains B. It provides extended site validation C. It does not require a trusted certificate authority D. It protects unlimited subdomains Answer: B QUESTION 40 After a merger between two companies a security analyst has been asked to ensure that the organization's systems are secured against infiltration by any former employees that were terminated during the transition. Which of the following actions are MOST appropriate to harden applications against infiltration by former employees? (Select TWO.) A. Monitor VPN client access B. Reduce failed login out settings C. Develop and implement updated access control policies D. Review and address invalid login attempts E. Increase password complexity requirements F. Assess and eliminate inactive accounts Answer: CF QUESTION 41 A new mobile application is being developed in-house. Security reviews did not pick up any major flaws, however vulnerability scanning results show fundamental issues at the very end of the project cycle. Which of the following security activities should also have been performed to discover vulnerabilities earlier in the lifecycle? A. Architecture review B. Risk assessment C. Protocol analysis D. Code review Answer: D QUESTION 42 A security administrator is creating a subnet on one of the corporate firewall interfaces to use as a DMZ which is expected to accommodate at most 14 physical hosts. Which of the following subnets would BEST meet the requirements? A. 192.168.0.16/25 B. 192.168.0.16/28 C. 192.168.1.50/25 D. 192.168.2.32/27 Answer: B QUESTION 43 A company has a security policy that specifies all endpoint computing devices should be assigned a unique identifier that can be tracked via an inventory management system. Recent changes to airline security regulations have cause many executives in the company to travel with mini tablet devices instead of laptops. These tablet devices are difficult to tag and track. An RDP application is used from the tablet to connect into the company network. Which of the following should be implemented in order to meet the security policy requirements? A. Virtual Desktop Infrastructure (VDI) B. WS-security and geo-fencing C. A Hardware Security Module (HSM) D. RFID tagging system E. MDM software F. Security Requirements Traceability Matrix (SRTM) Answer: E QUESTION 44 The security administrator receives an email on a non-company account from a coworker stating that some reports are not exporting correctly. Attached to the email was an example report file with several customers' names and credit card numbers

with the PIN. Which of the following is the BEST technical controls that will help mitigate this risk of disclosing sensitive data? A. Configure the mail server to require TLS connections for every email to ensure all transport data is encrypted. B. Create a user training program to identify the correct use of email and perform regular audits to ensure compliance. C. Implement a DLP solution on the email gateway to scan email and remove sensitive data or files. D. Classify all data according to its sensitivity and inform the users of data that is prohibited to share. Answer: C

QUESTION 45 A technician is configuring a wireless guest network. After applying the most recent changes the technician finds the new devices can no longer find the wireless network by name but existing devices are still able to use the wireless network. Which of the following security measures did the technician MOST likely implement to cause this scenario? A. Deactivation of SSID broadcast B. Reduction of WAP signal output power C. Activation of 802.1X with RADIUS D. Implementation of MAC filtering E. Beacon interval was decreased Answer: A

QUESTION 46 A security administrator has been assigned to review the security posture of the standard corporate system image for virtual machines. The security administrator conducts a thorough review of the system logs, installation procedures, and network configuration of the VM image. Upon reviewing the access logs and user accounts, the security administrator determines that several accounts will not be used in production. Which of the following would correct the deficiencies? A. Mandatory access controls B. Disable remote login C. Host hardening D. Disabling services Answer: C

QUESTION 47 Although a web enabled application appears to only allow letters in the comment field of a web form, malicious user was able to carry a SQL injection attack by sending special characters through the web comment field. Which of the following has the application programmer failed to implement? A. Revision control system B. Client side exception handling C. Server side validation D. Server hardening Answer: C

QUESTION 48 An attacker discovers a new vulnerability in an enterprise application. The attacker takes advantage of the vulnerability by developing new malware. After installing the malware the attacker is provided with access to the infected machine. Which of the following is being described? A. Zero-day exploit B. Remote code execution C. Session hijacking D. Command injection Answer: A

QUESTION 49 A security administrator returning from a short vacation receives an account lock-out message when attempting to log into the computer. After getting the account unlocked the security administrator immediately notices a large amount of emails alerts pertaining to several different user accounts being locked out during the past three days. The security administrator uses system logs to determine that the lock-outs were due to a brute force attack on all accounts that has been previously logged into that machine. Which of the following can be implemented to reduce the likelihood of this attack going undetected? A. Password complexity rules B. Continuous monitoring C. User access reviews D. Account lockout policies Answer: B

QUESTION 50 A bank requires tellers to get manager approval when a customer wants to open a new account. A recent audit shows that there have been four cases in the previous year where tellers opened accounts without management approval. The bank president thought separation of duties would prevent this from happening. In order to implement a true separation of duties approach the bank could do what? A. Require the use of two different passwords held by two different individuals to open an account. B. Administer account creation on a role based access control approach. C. Require all new accounts to be handled by someone else other than a teller since they have different duties. D. Administer account creation on a rule based access control approach. Answer: C

QUESTION 51 A security administrator has been tasked with improving the overall security posture related to desktop machines on the network. An auditor has recently that several machines with confidential customer information displayed in the screens are left unattended during the course of the day. Which of the following could the security administrator implement to reduce the risk associated with the finding? A. Implement a clean desk policy B. Security training to prevent shoulder surfing C. Enable group policy based screensaver timeouts D. Install privacy screens on monitors Answer: C

QUESTION 52 Company policy requires the use of passphrases instead of passwords. Which of the following technical controls MUST be in place in order to promote the use of passphrases? A. Reuse B. Length C. History D. Complexity Answer: D

QUESTION 53 During a routine audit, it is discovered that someone has been using a stale administrator account to log into a seldom used server. The person has been using the server to view inappropriate websites that are prohibited to end users. Which of the following could best prevent this from occurring again? A. Credential management B. Group policy management C. Acceptable use policy D. Account expiration policy Answer: B

QUESTION 54 Which of the following should identify critical systems and components? A. MOU B. BPAC. ITCPD. BCP Answer: D

QUESTION 55 Which of the following works by implanting software on systems but delays execution until a specific set of conditions is met? A. Logic bomb B. Trojan C. Scareware D. Ransomware Answer: A

QUESTION 56 A web application is configured to target browsers and allow access to bank accounts to siphon money to a foreign account. This is an example of which of the following attacks? A. SQL injection B. Header manipulation C. Cross-site scripting D. Flash cookie exploitation Answer: C

QUESTION 57 Technicians working with servers hosted at the company's datacenter are increasingly complaining of electric shocks when touching metal items which have been linked to hard drive failures. Which of the following should be implemented to correct this issue? A. Decrease the room temperature B. Increase humidity in the room C. Utilize

better hot/cold aisle configurationsD. Implement EMI shielding Answer: B QUESTION 58A portable data storage device has been determined to have malicious firmware. Which of the following is the BEST course of action to ensure data confidentiality? A. Format the deviceB. Re-image the deviceC. Perform virus scan in the deviceD. Physically destroy the device Answer: C QUESTION 59A security administrator must implement a system to ensure that invalid certificates are not used by a custom developed application. The system must be able to check the validity of certificates even when internet access is unavailable. Which of the following MUST be implemented to support this requirement? A. CSRB. OCSPC. CRLD. SSH Answer: C QUESTION 60A technician has installed new vulnerability scanner software on a server that is joined to the company domain. The vulnerability scanner is able to provide visibility over the patch posture of all company's clients. Which of the following is being used? A. Gray box vulnerability testingB. Passive scanC. Credentialed scanD. Bypassing security controls Answer: A
